

Math 421 - Complex Variables - Fall 2009

MWF 11:15 → 12:05 LGRT 115

Professor: Eyal Markman

Office: LGRT 1223G

Office Phone: 545-2788

E-mail: markman@math.umass.edu

Office hours: Wednesday 3:10 → 4:00 pm, Friday, 12:30 → 2:00 pm, and by appointment. Office hours are held in 1223G LGRT.

Course Web page: <http://www.math.umass.edu/~markman/> Will be available soon.

Please check it often!

Text: *Complex Variables and Applications*, 8-th Edition, by James Ward Brown and Ruel V. Churchill, McGraw-Hill.

Prerequisites: Math 233.

Homework: Will be assigned weekly and will be due each Friday, unless mentioned otherwise. The homework will be graded by a special grader. Due to lack of funds, it will not be possible to grade all the homework problems assigned. A few of the homework problems will be corrected and graded every week. Nevertheless, for your own benefit, you will be asked to hand in *all* the homework problems assigned. Your grade on each homework assignment will be calculated as follows:

70% The grade on the corrected problems.

30% Credit for handing in *most* of the homework problems assigned. Partial credit will be given.

Late homework will not be collected. Instead, your three lowest grades will be dropped.

Grades:

Homework–20%

Two Midterms–50% (each 25%)

Final Exam –30%

First Midterm: Thursday, October 15, 7:00 - 8:30 PM.

Second Midterm: Wednesday, November 18, 7:00 - 8:30 PM.

Final: To be determined by the scheduling office during the final exam period. The last day of this period is December 21. Make-ups will not be given to accomodate travel plans.

Calculators Policy: Calculators will **not** be allowed in the exams. Calculators and computers may be used to check answers on the homework assignments. Nevertheless, an unsubstantiated answer will not receive credit.

See back . . .

Homework Assignment 1 (Due Friday, September 18)

Section 2 page 5: 4

Section 3 page 8: 1 (a), (b)

Section 4 page 12: 4, 5 (a), (c), 6

Section 5 page 14: 1 (c), (d), 9, and the extra problem:

Use established properties of moduli to show that when $|z_3| \neq |z_4|$, then

$$\left| \frac{z_1 + z_2}{z_3 + z_4} \right| \leq \frac{|z_1| + |z_2|}{||z_3| - |z_4||}$$

Section 7 page 22: 1 (a), 2, 3, 4, 5 (c)

Syllabus:

- 1) Complex Numbers: algebraic and geometric properties, polar form, powers and roots.
- 2) Analytic functions: Differentiability and Cauchy-Riemann equations, Harmonic functions, examples.
- 3) Elementary functions of a complex variable: exponential and trigonometric functions, logarithms.
- 4) Path integrals: contour integration and Cauchy's integral formula; Liouville's theorem, Maximum modulus theorem, the Fundamental Theorem of Algebra.
- 5) Series: Taylor and Laurent expansions, convergence, term-by-term operations with infinite series.
- 6) Isolated singularities and residues. Essential singularities and poles.
- 7) Evaluation of Improper integrals via residues.

If time permits:

- 8) Mappings by elementary functions and linear fractional transformations; conformal mappings.
