

## Math 421 (74112) - Complex Variables - Fall 2012

MWF 11:15 → 12:05 LGRT 202

**Professor:** Eyal Markman

**Office:** LGRT 1223G

**Office Phone:** 545-2788

**E-mail:** markman@math.umass.edu

**Office hours:** Monday 2:20 → 3:20 pm, Wednesday, 3:00 → 4:00 pm, and by appointment. Office hours are held in 1223G LGRT.

**Course Web page:** <http://www.math.umass.edu/~markman/> **Please check it often!**

**Text:** *Complex Variables and Applications*, 8-th Edition, by James Ward Brown and Ruel V. Churchill, McGraw-Hill.

**Prerequisites:** Math 233.

**Homework:** Will be assigned weekly and will be due each Wednesday, unless mentioned otherwise. The homework will be graded by a special grader. Due to lack of funds, it will not be possible to grade all the homework problems assigned. A few of the homework problems will be corrected and graded every week. Nevertheless, for your own benefit, you will be asked to hand in *all* the homework problems assigned. Your grade on each homework assignment will be calculated as follows:

70% The grade on the corrected problems.

30% Credit for handing in *most* of the homework problems assigned. Partial credit will be given.

Late homework will not be collected. Instead, your three lowest grades will be dropped.

**Grades:**

Homework—20%

Two Midterms—50% (each 25%)

Final Exam —30%

**First Midterm:** Thursday, October 11, 7:00 - 8:30 PM.

**Second Midterm:** Tuesday, November 13, 7:00 - 8:30 PM.

**Final:** To be determined by the scheduling office during the final exam period. The last day of this period is December 17. Make-ups will not be given to accommodate travel plans.

**Calculators Policy:** Calculators will **not** be allowed in the exams. Calculators and computers may be used to check answers on the homework assignments. Nevertheless, an unsubstantiated answer will not receive credit.

**See back . . .**

## Homework Assignment 1 (Due Friday, September 14)

Section 2 page 5: 4

Section 3 page 8: 1 (a), (b)

Section 4 page 12: 4, 5 (a), (c), 6

Section 5 page 14: 1 (c), (d), 9, and the extra problem:

Use established properties of moduli to show that when  $|z_3| \neq |z_4|$ , then

$$\left| \frac{z_1 + z_2}{z_3 + z_4} \right| \leq \frac{|z_1| + |z_2|}{||z_3| - |z_4||}$$

Section 7 page 22: 1 (a), 2, 3, 4, 5 (c)

Check our web site for possible additional homework.

### Syllabus:

- 1) Complex Numbers: algebraic and geometric properties, polar form, powers and roots.
- 2) Analytic functions: Differentiability and Cauchy-Riemann equations, Harmonic functions, examples.
- 3) Elementary functions of a complex variable: exponential and trigonometric functions, logarithms.
- 4) Path integrals: contour integration and Cauchy's integral formula; Liouville's theorem, Maximum modulus theorem, the Fundamental Theorem of Algebra.
- 5) Series: Taylor and Laurent expansions, convergence, term-by-term operations with infinite series.
- 6) Isolated singularities and residues. Essential singularities and poles.
- 7) Evaluation of Improper integrals via residues.

If time permits:

- 8) Mappings by elementary functions and linear fractional transformations; conformal mappings.
